

# Preformed Thermoplastic Pavement Markings for Airfields

**Achieve maximum value and optimal performance  
with durable pavement markings engineered  
to last 8 to 12 times longer than paint.**

AirMark® is a durable preformed thermoplastic pavement marking material engineered with the objectives of safety, durability, workmanship, and economy. Designed for use on taxiways, ramps, aprons, gates, as well as vehicular roadways on the airside, the advantages and value of AirMark® are pronounced in the application of multi-colored markings that are typically time and labor intensive.

The homogenous composition of AirMark® supports long-term performance regarding bond, retroreflectivity, and UV resistance. The FAA requirements for multi-colored surface signage and delineation markings presents installation and maintenance concerns using traditional application methods. With preformed thermoplastic now included in the AC 150/5370-10E, AirMark® provides a sensible solution with efficient life cycle performance and savings while complementing the total airfield marking program.
